

Real Estate Terminology Glossary (Dummy Source)

- Days on Market (DOM): Days on Market is the number of days a property is listed as active before it goes pending, contingent, or closed. Lower DOM usually suggests stronger buyer demand for that market segment.
- Escrow: Escrow is a neutral third-party process that holds funds and required documents until all contract terms are satisfied. Once contingencies are cleared and conditions are met, escrow closes and ownership transfers.
- Comparable Sales (Comps): Comps are recently sold properties with similar location, size, condition, and features used to estimate market value. Agents and appraisers adjust comp prices based on differences such as lot size, upgrades, view, and bedroom count.
- Cap Rate: Capitalization rate (cap rate) is annual net operating income divided by property value or purchase price. It is commonly used to compare investment properties on an income basis.
- List-to-Close Ratio: List-to-close ratio is $\text{ClosePrice} / \text{ListPrice}$, typically shown as a percentage. A ratio above 100% can indicate competitive conditions; below 100% can indicate negotiation leverage for buyers.
- Price per Square Foot (PPSF): PPSF is calculated as $\text{SalePrice} / \text{LivingArea}$. It is useful for quick comparisons, but should be interpreted with property condition, location, lot characteristics, and floorplan differences.
- Active Inventory: Active inventory is the count of listings currently available for sale in a given area and timeframe snapshot.
- Months of Supply: Months of supply estimates how long current inventory would last at the recent sales pace. A higher value generally indicates a softer market.

IDX Exchange Internal Knowledge (Dummy Source)

IDX Exchange uses a code-routed action model for real estate assistant workflows.

The main actions include:

- search_active_properties for active listing lookup
- search_sold_properties for sold comparable lookup
- market_analytics for trend and market metric reporting
- semantic_search_properties for embedding-based listing similarity
- recommend_similar_properties for hybrid recommendation scoring
- rag_knowledge for document-grounded terminology and field-definition Q&A
- The assistant accepts natural-language user input, converts it into structured action payloads, and executes deterministic code paths.

Data sources include:

- rets_property for active listing inventory
- california_sold for sold transaction comps and market metrics
- RAG knowledge retrieval is grounded by indexed source documents and schema-derived field references.
- When source context is insufficient, the assistant should explicitly state that there is not enough source evidence rather than guessing.

MLS Field Definitions

Table: rets_property (Active Listings)

- id (INT PK): Auto-increment primary key (current max ~228,410)
- L_ListingID (VARCHAR): MLS system listing ID; joins to california_sold.ListingKey
- L_DisplayId (VARCHAR): Human-readable MLS number shown on portals
- L_Address (VARCHAR): Full street address
- L_City (VARCHAR): City; indexed for fast city-based queries
- L_Zip (VARCHAR): Postal code; indexed
- L_Class (VARCHAR): Property class (Residential, CommercialSale, Land, etc.)
- L_Type_ (VARCHAR): Subtype (SingleFamilyResidence, Condominium, etc.); indexed
- L_Keyword2 (INT): Bedrooms total
- LM_Dec_3 (DECIMAL(4,1)): Bathrooms total (supports half-baths, e.g., 2.5)
- L_SystemPrice (INT): Current list price (search/display price)
- LM_Int2_3 (INT): Approximate finished square footage
- L_Keyword1 (VARCHAR): Lot size (string, often in sq ft or acres)
- LMD_MP_Latitude (DECIMAL(18,15)): Geo latitude (high precision)
- LMD_MP_Longitude (DECIMAL(19,15)): Geo longitude (high precision)
- L_Status (VARCHAR): Listing status (Active, Pending, Withdrawn, etc.)
- L_Remarks (MEDIUMTEXT): Full listing description; FULLTEXT indexed (ft_remarks)
- L_Photos (LONGTEXT): JSON array of Cotality/Trestle photo URLs
- LA1_UserFirstName (VARCHAR): Listing agent first name
- LA1_UserLastName (VARCHAR): Listing agent last name
- ListAgentEmail (VARCHAR): Listing agent email address
- ListAgentDirectPhone (VARCHAR): Listing agent direct phone
- LO1_OrganizationName (VARCHAR): Listing office/brokerage name
- ListingContractDate (DATE): Date listing agreement was signed
- YearBuilt (INT): Year property was constructed
- SubdivisionName (VARCHAR): Subdivision or community name
- AssociationFee (INT): Monthly HOA fee in dollars
- AssociationAmenities (TEXT): HOA amenities (Golf, Pool, Tennis, etc.)
- DaysOnMarket (INT): Days on market at time of data pull
- PoolPrivateYN (VARCHAR): Private pool present (True/False)
- FireplaceYN (VARCHAR): Fireplace present (True/False)
- ViewYN (VARCHAR): Has a notable view (True/False)
- View (VARCHAR): View description (Mountains, Ocean, GolfCourse, etc.)
- LotSizeAcres (DECIMAL(10,4)): Lot size in acres

- LotSizeSquareFeet (DECIMAL(14,2)): Lot size in square feet
- PreviousListPrice (DECIMAL(12,0)): Prior list price; enables price reduction analysis
- StandardStatus (VARCHAR): RESO standard status (Active, Pending, Closed)
- CountyOrParish (VARCHAR): County name (e.g., Riverside, Los Angeles)
- ParcelNumber (VARCHAR): Assessor parcel number (APN)
- Cooling (VARCHAR): Cooling system type
- Heating (VARCHAR): Heating system type
- ArchitecturalStyle (VARCHAR): Architectural style (Modern, Ranch, Mediterranean, etc.)
- PhotoCount (INT): Number of listing photos available
- ModificationTimestamp (DATETIME): Last modification timestamp for incremental syncTable: california_sold (Closed Transactions)
- City: City where the sold property is located.
- PostalCode: ZIP/postal code for sold property.

Table: california_sold (Sold Transactions)

- ListingKey (BIGINT): Unique listing identifier; joins to rets_property.L_ListingID
- ClosePrice (DOUBLE): Final sale/close price
- CloseDate (VARCHAR): Date the transaction closed (YYYY-MM-DD format)
- OriginalListPrice (DOUBLE): Original asking price when first listed
- ListPrice (DOUBLE): List price at time of contract
- DaysOnMarket (BIGINT): Days from listing to contract
- PropertyType (VARCHAR): Property category (Residential, Land, ResidentialLease, CommercialSale, etc.)
- PropertySubType (VARCHAR): Property subtype (SingleFamilyResidence, Condominium, Duplex, etc.)
- LivingArea (DOUBLE): Finished living area in square feet
- LotSizeAcres (DOUBLE): Lot size in acres
- LotSizeSquareFeet (DOUBLE): Lot size in square feet
- BedroomsTotal (DOUBLE): Number of bedrooms
- BathroomsTotalInteger (DOUBLE): Number of bathrooms
- YearBuilt (DOUBLE): Year property was built
- City (VARCHAR): City of the property
- PostalCode (VARCHAR): ZIP code
- Latitude (DOUBLE): Geographic latitude
- Longitude (DOUBLE): Geographic longitude

- UnparsedAddress (VARCHAR): Full street address
- ListAgentFirstName (VARCHAR): Listing agent first name
- ListAgentLastName (VARCHAR): Listing agent last name
- ListAgentFullName (VARCHAR): Listing agent full name
- BuyerAgentFirstName (VARCHAR): Buyer agent first name
- BuyerAgentLastName (VARCHAR): Buyer agent last name
- ListOfficeName (VARCHAR): Listing brokerage name
- BuyerOfficeName (VARCHAR): Buyer brokerage name
- PoolPrivateYN (VARCHAR): Private pool flag (True/False/empty)
- ViewYN (VARCHAR): View flag (True/False/empty)
- FireplaceYN (VARCHAR): Fireplace flag (True/False/empty)
- NewConstructionYN (VARCHAR): New construction flag (True/False)
- GarageSpaces (DOUBLE): Number of garage spaces
- AssociationFee (DOUBLE): Monthly HOA fee
- SubdivisionName (VARCHAR): Subdivision/community name
- HighSchoolDistrict (VARCHAR): School district name
- ListingContractDate (VARCHAR): Date listing was entered (YYYY-MM-DD)
- PurchaseContractDate (VARCHAR): Date offer was accepted
